Profile

I build production web systems at Brycen Myanmar. I helped build a contract management platform from scratch in Laravel and React, developed Rakuten, Amazon and Yahoo! store integrations running on AWS, and now work on a Java/Angular retail system for a Japanese client. I use Claude Code every day and pick up new tools quickly.

Skills

BACKEND	**PHP**, **Laravel**, Java, Jersey (JAX-RS), CakePHP, Zend Framework
FRONTEND	**React**, Angular, JavaScript, TypeScript, jQuery, Blade, Tailwind CSS, Bootstrap
DATA	MySQL, MSSQL, PL/SQL, JasperReports
CLOUD & DEVOPS	AWS (Lambda, EC2, CloudWatch), GCP, Docker, Linux, Tomcat, Maven, Git, GitHub, GitLab CI/CD
AI & AUTOMATION	Claude Code, Python scripting, Shell scripting
FAMILIAR WITH	Next.js, Node.js, Express, Spring, PostgreSQL, MongoDB

Experience

Full Stack Developer, Brycen Myanmar — 07/2023 – Present

Retail Core System

04/2025 – Present

Large enterprise retail system for a Japanese client.

- Develop and maintain screens, REST APIs and PDF/CSV reports for a large enterprise retail system (700+ feature modules) built for a Japanese client, across an Angular frontend and a Java backend.
- Optimized a Python/MySQL batch job that exports contract data to CSV, cutting runtime from **~458 s to ~16 s (~28× faster)** on a 108K-contract benchmark and eliminating ~20K duplicate output rows.
- Resolve system-test defects reported by the client's Japanese QA team through Redmine and Backlog: reproduce the issue, trace the root cause across Angular, Java and SQL, and ship fixes via GitLab merge requests and a multi-stage CI/CD pipeline (dev → staging → production).
- Use Claude Code for AI-assisted development and built internal tooling, including a Python CLI for MySQL dump/restore and Chrome automation for capturing test evidence, to speed up debugging, test-data setup and QA reporting.
- Collaborate with cross-functional teams to align technical solutions with business needs.

EC Mall Centralized Management System 2.0

07/2024 – 04/2025

Order and delivery management for shops selling on multiple marketplaces.

- Built full-stack features with Laravel, Blade and jQuery, including order processing, order tag registration and delivery management.
- Developed background processes that integrate with **Rakuten, Amazon and Yahoo!** online stores.
- Ran batch processing and system integration on AWS Lambda and EC2 (via SSH); monitored jobs and troubleshot failures with CloudWatch Logs.
- Strengthened security and reliability: XSS prevention, Subresource Integrity for scripts, removal of unnecessary web-server headers, and database deadlock prevention.

Laravel · PHP · jQuery · Blade · Bootstrap · MySQL · Docker · AWS · Shell Script · Ubuntu

EC Mall Centralized Management System 1.0

05/2024 – 07/2024

Product registration and listing for Rakuten, Amazon and Yahoo! shops.

- Developed EC-shop registration features, including product creation and listing uploads to Rakuten, Amazon and Yahoo! marketplaces.
- Analyzed and maintained legacy code during a three-month engagement, and ran knowledge-sharing sessions that helped junior developers onboard faster.

Zend Framework (PHP) · jQuery · Bootstrap · MySQL · AWS · Ubuntu

Contract Management System

11/2023 – 04/2024

Contract registration and management platform, built from scratch.

- Core team member who built the system **from scratch**, with a React frontend and a Laravel backend.
- Built a responsive contract registration page in React, integrating third-party libraries to extend functionality and improve the user experience.
- Implemented Laravel backend features: complex form registration, CSV and PDF export, scheduled background tasks and user authentication.
- Worked closely with senior developers to integrate the frontend and backend smoothly.

Laravel · React · Bootstrap · MySQL · GCP

Employee Accounting System

08/2023 – 10/2023

Employee and salary management system.

- Developed new features and enhancements with CakePHP, jQuery and MySQL.
- Fixed bugs and optimized SQL queries for faster data retrieval and page loads.
- Maintained and updated existing features to keep the system current.
